

BOOK I — OPERATIONAL SOURCE CONSTITUTION

Document ID: PH6-BOOKI-CONSOLIDATED-1.0

Role: CANON

Status: ACTIVE

Question Answered: What is true.

B1 § 1 — System Identity and Governing Principle

PH6 / CRAM is a **deterministic scientific evidence instrument**.

Governing Principle (Core Seal):

- Capture everything configured.
- Preserve it exactly.
- Measure deterministically.
- Interpret separately.
- Prove everything.

B1 § 2 — Lane Architecture and Authority Model

- **Lane 1 (Authoritative):** Capture, Preserve, Measure (PSEUDO-M), Adjudicate (PSEUDO-A). Authority: **Absolute**.
- **Lane 2 (Advisory):** Hypothesis, Experimentation, Advisory AI. Authority: **Zero**.
- **PSEUDO Authority Invariant:** PSEUDO alone adjudicates. Scientific mode may not adjudicate.
- **Scientific Extension Invariant:** PSEUDO-SCI extends observables, never verdict authority.
- **Science Consumption Law:** Science may consume PSEUDO outputs. Science may not tune PSEUDO.

B1 § 3 — Seven Iron Laws

1. Determinism over intelligence
2. Auditability over adaptability

3. PSEUDO authority over AI
4. Never Block RSYNC
5. Offline equals Online
6. Explicit modes only
7. Bounded behavior always

B1 § 4 — PASS/DROP Exclusivity + Vocabulary Lock

Valid verdict terms: PASS , DROP .

Forbidden: ACCEPT, REJECT, FLAG, HOLD, REVIEW, RETAIN.

PASS/DROP is exclusive to PSEUDO-A in Lane 1.

B1 § 5 — One-Way Membrane

Lane 1 —→ Lane 2 (ALLOWED - seed only)

Lane 2 —→ Lane 1 (FORBIDDEN - in all forms)

B1 § 6 — Boundary Inheritance Law

Implementation may refine constraints; implementation may NOT relax constraints.

B1 § 7 — Update Exception Clause

Constitutional sources override all implementation, patch, and advisory content.

B1 § 8 — FAST/SLOW Doctrine

FAST execution for Lane 1; SLOW/Advisory for Lane 2.

B1 § 9 — Six-Engine Explanatory Mapping

1. Engine I: PSEUDO (Authority)
2. Engine II: Runtime (FAST)
3. Engine III: Persistence (HOT)
4. Engine IV: Topology (SoSo)
5. Engine V: Swarm (Disabled)
6. Engine VI: Instrument Science (PSEUDO-SCI)

B1 § 10 — Swarm-Disabled Constitutional Constraints

Swarm is disabled in production. Authority: **Zero**.

B1 § 11 — Truth Class Separation

Class	Location	Authority
Observed Truth	Lane 1	Absolute
Verdict Truth	Lane 1	Absolute
Hypothesis Truth	Lane 2 advisory	Zero

B1 § 12 — Constitutional Invariants

1. RSYNC Sovereignty
2. Atomic Write Contract
3. CRAM Immutability
4. Deterministic Hashing (BLAKE2b-256)
5. Canonical JSON Serialization
6. Lane Isolation
7. Verdict Exclusivity
8. No Runtime Learning in Lane 1
9. Crash Consistency
10. Audit Traceability

B1 § 13 — Inheritance Law Update

Clarifies that all extensions must inherit the most restrictive boundaries of the parent.

B1 § 14 — AI Reconstruction Rules

AI may be used for reconstruction in Lane 2 but has zero authority over Lane 1 evidence.

B1 § 15 — Functional Partition Table

Partition	Role	Authority
I	Measurement/Adjudication	Sole Lane-1 Verdict Authority
II	Runtime	None
III	Persistence	None
IV	Topology	Advisory only
V	Distributed Support	Disabled
VI	Instrument Science	None — Advisory only

B1 § 16 — Swarm Constitutional Containment Rule

Swarm outputs must be confined to MRAM-S.

B1 § 17 — Framing Rule

No authority difference between different scientific framings.

B1 § 18 — No Authority Widening Rule

Forbidden: Partition-derived authority, alternate PASS/DROP routes, threshold influence by advisory systems.

B1 § 19 — Boundary Inheritance Clarification

Reiterates that implementation cannot weaken doctrine.

B1 § 20 — DRIFT_FAIL Condition Definitions

- Lane 2 writes CRAM.
- AI emits verdict.
- Verdict is not PASS/DROP.
- Thresholds mutate at runtime.

B1 § 21 — Definitions and Glossary

- **CRAM:** Crash RAM / Cold RAM.

- **PSEUDO:** Deterministic authority engine.
- **MRAM-S:** Advisory shadow storage.

B1 § 22 — Engine VI Constitutional Limits and Boundary Laws

Engine VI may advise science; Engine VI may not govern authority.
