

BOOK III — BOUNDARY CONTAINMENT ANNEX

Document ID: PH6-BOOKIII-CONSOLIDATED-1.0

Role: CANON

Status: ACTIVE

Question Answered: What is forbidden.

B3 § 1 — Containment Doctrine

The containment layer ensures that advisory systems (Lane 2) never contaminate the authoritative instrument (Lane 1).

B3 § 2 — Swarm Prohibitions

- Swarm is **DISABLED** in production.
- Swarm has **ZERO** authority.
- Swarm may not write to CRAM-0, CRAM-A, or CRAM-R.
- Swarm may not influence PASS/DROP verdicts.

B3 § 3 — AI / SoSo Containment

- AI outputs are advisory only.
- SoSo topology is confined to MRAM-S.
- No AI-generated content may enter an EvidencePacket.

B3 § 4 — RSYNC Protection

Advisory services must never block or delay RSYNC export (Priority Zero).

B3 § 5 — Forbidden Transformations

- Promoting Advisory to Authority.
- Using Engine models as Verdict paths.
- Allowing Scientific mode to create Doctrine exceptions.

B3 § 6 — Boundary Inheritance Law (Containment)

Any extension or patch must inherit the most restrictive containment boundaries.

B3 § 7 — Drift Detection and DRIFT_FAIL

The system must emit a DRIFT_FAIL and halt if any containment boundary is breached.
